### 1 [Types and persistence in database programming languages](#)

Malcolm P. Atkinson, O. Peter Buneman  
June 1987 **ACM Computing Surveys (CSUR)**, Volume 19 Issue 2

**Publisher:** ACM Press

Full text available: [pdf\(7.91 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

Traditionally, the interface between a programming language and a database has either been through subroutine calls, or it has required some form of embedding of one language in another. Recent database and programming language techniques have received some long-overdue recognition. It has been made to construct programming languages with completely integrated database management systems.

### 2 [Evolution of Data-Base Management Systems](#)

James P. Fry, Edgar H. Sibley  
March 1976 **ACM Computing Surveys (CSUR)**, Volume 8 Issue 1

**Publisher:** ACM Press

Full text available: [pdf\(2.63 MB\)](#)

Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

### 3 [Real-time shading](#)

Marc Olano, Kurt Akeley, John C. Hart, Wolfgang Heidrich, Michael McCool, Jason L. Mitchell, Randi  
August 2004 **Proceedings of the conference on SIGGRAPH 2004 course notes GRAPH '04**

**Publisher:** ACM Press

Full text available: [pdf\(7.39 MB\)](#)

Additional Information: [full citation](#), [abstract](#)

Real-time procedural shading was once seen as a distant dream. When the first version of this course was developed, time shading was possible, but only with one-of-a-kind hardware or by combining the effects of many small programs. Today, almost every new computer comes with graphics hardware capable of interactively executing thousands of instructions. This course has been redesigned to address today's real-time shading.

### 4 [Human-computer interface development: concepts and systems for its management](#)

H. Rex Hartson, Deborah Hix  
March 1989 **ACM Computing Surveys (CSUR)**, Volume 21 Issue 1

**Publisher:** ACM Press

Full text available: [pdf\(7.97 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

*Human-computer interface management*, from a computer science viewpoint, focuses on the pr computer interfaces, including their representation, design, implementation, execution, evaluat presents important concepts of interface management: dialogue independence, structural mode rapid prototyping, development methodologies, and control structures. *Dialogue independence*

5 GPGPU: general purpose computation on graphics hardware

 David Luebke, Mark Harris, Jens Krüger, Tim Purcell, Naga Govindaraju, Ian Buck, Cliff Woolley, A: August 2004 **Proceedings of the conference on SIGGRAPH 2004 course notes GRAPH '04**

**Publisher:** ACM Press

Full text available:  [pdf\(63.03 MB\)](#)

Additional Information: [full citation](#), [abstract](#)

The graphics processor (GPU) on today's commodity video cards has evolved into an extremely latest graphics architectures provide tremendous memory bandwidth and computational horsepower and pixel processing units that support vector operations up to full IEEE floating point precision graphics hardware, making this computational power accessible. Architecturally, GPUs are high

6 IDL: sharing intermediate representations

 David Alex Lamb July 1987 **ACM Transactions on Programming Languages and Systems (TOPLAS)**, Volu

**Publisher:** ACM Press

Full text available:  [pdf\(1.77 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citing](#)

IDL (Interface Description Language) is a practical and useful tool for controlling the exchange of components of a large system. IDL is a notation for describing collections of programs and the communicate. Using IDL, a designer gives abstract descriptions of data structures, together with specialize the abstract structures for particular programs. A tool, the IDL translator, generates

7 The elements of nature: interactive and realistic techniques

 Oliver Deussen, David S. Ebert, Ron Fedkiw, F. Kenton Musgrave, Przemyslaw Prusinkiewicz, Doug August 2004 **Proceedings of the conference on SIGGRAPH 2004 course notes GRAPH '04**

**Publisher:** ACM Press

Full text available:  [pdf\(17.65 MB\)](#)

Additional Information: [full citation](#), [abstract](#)

This updated course on simulating natural phenomena will cover the latest research and produce the elements of nature. The presenters will provide movie production, interactive simulation, a task of photorealistic modeling, rendering, and animation of natural phenomena. The course offers interactive graphics hardware-based simulation techniques and the latest physics-based simulation

**18** Programming languages for distributed computing systems

Henri E. Bal, Jennifer G. Steiner, Andrew S. Tanenbaum

September 1989 **ACM Computing Surveys (CSUR)**, Volume 21 Issue 3

**Publisher:** ACM Press

Full text available: [pdf\(6.50 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

When distributed systems first appeared, they were programmed in traditional sequential language library procedures for sending and receiving messages. As distributed applications became more common, this ad hoc approach became less satisfactory. Researchers all over the world began designing languages for implementing distributed applications. These languages and their history, their underlying principles,

**19** Data abstraction and information hiding

K. Rustan M. Leino, Greg Nelson

September 2002 **ACM Transactions on Programming Languages and Systems (TOPLAS)**, Volume 24 Issue 5

**Publisher:** ACM Press

Full text available: [pdf\(469.27 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

This article describes an approach for verifying programs in the presence of data abstraction and features of modern programming languages with objects and modules. This article draws on our automatic program checker, and focuses on the property of *modular soundness*: that is, the property that the individual modules of a program suffice to ensure the correctness of the composite program.

**Keywords:** Abstract variables, abstraction dependencies, extended static checking, modifies clause, oriented programming, specifications

**20** Special issue: AI in engineering

D. Sriram, R. Joobbani

April 1985 **ACM SIGART Bulletin**, Issue 92

**Publisher:** ACM Press

Full text available: [pdf\(8.79 MB\)](#) Additional Information: [full citation](#), [abstract](#)

The papers in this special issue were compiled from responses to the announcement in the July 1984 and notices posted over the ARPAnet. The interest being shown in this area is reflected in the size of the special issue. About half the papers were received over the computer network.
